# UMMITR

# Investment Strategy

The investment seeks long-term capital appreciation; current income is the secondary consideration. The fund invests primarily in common stocks that in the opinion of the fund's adviser appear to be temporarily undervalued by the market. The Adviser considers a security to be temporarily undervalued if the security's intrinsic value is significantly greater than the range in which the security is trading in the securities markets. It may invest up to 20% of its net assets in cash and other cash equivalents.

The S&P 500 Index is a widely recognized unmanaged index of equity prices and is representative of a broader market and range of securities than is found in the Fund's portfolio. The index returns do not reflect the deduction of expenses, which have been deducted from the Fund's returns. The Index return assumes reinvestment of all distributions and does not reflect the deduction of taxes and fees. Individuals cannot invest directly in the Index, however, an individual can invest in exchange traded funds or other investment vehicles that attempt to track the performance of a benchmark index.

You should carefully consider the investment objectives, potential risks, management fees, and charges and expenses of the Fund before investing. The Fund's prospectus contains this and other information about the Fund, and should be read carefully before investing. You may obtain a current copy of the Fund's prospectus by calling -866-954-6682 or go to the "Prospectuses and Reports" section of this site for other delivery options. Please read the Prospectus carefully before investing.

Past per ormance is no guarantee o uture results. Investing involves risk, including loss o principal. There may be circumstances that could prevent the Fund rom achieving its investment goal and you may lose money by investing in the Fund. I the Adviser's perceptions o a company's growth potential are wrong, the securities purchased may not per orm as expected, reducing the Fund's return.

U.S. OE Large Blend: Large-Blend portfolios are fairly representative of the overall U.S. stock market in size, growth rates, and price. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of U.S. industries, and owing to their broad exposure, the portfolios' returns are often similar to those of the S&P 500 index.
